

## Posting Permits and Construction Documents

**Date:** August 5, 2014

**Last Revised:** January 2, 2023

**Reason for Policy:**

The VUSBC requires that permits for construction be posted for public inspection during construction (110.5). This policy describes posting of permits and the relationship to approved construction documents.

**Policy Statement:**

Building permits must be posted in a prominent, public location at each construction site for the duration of a project. All pages of the permit must be visible, as they contain critical public safety information.

Building permits include a reference to the *Date of Plans and Specifications*. This date correlates with the approved, stamped construction documents for the project. The approved construction documents must be kept on site for use and reference by OUBO and other inspectors during construction.
